A study of synoptic charts from 1891 to 1950, contour charts of isobaric surfaces from 1938 to 1950, charts of the mean-monthly distribution of temperature and its deviations from normal, data on the air temperature transition through 0° and +5° from 1891 to 1951, and data on the disappearance of the stable snow cover from 1938 to 1949 showed a clear connection between the macro processes of a winter season and of the spring season immediately following it. (a) If, in the majority of the months in a winter season, typical macro processes take place, then they will usually
